EDUCATION

Masters, Computer Science

Arizona State University, Tempe, AZ, USA

Jan 2022 - Dec 2023

4.0 GPA

Graduate Services Assistant: Computing Ethics (Aug '22 – Dec '23)

Bachelor of Technology, Electronics and Telecommunication

Veermata Jijabai Technological Institute, Mumbai, MH, India

Jul 2015 – May 2019

7.87 GPA

TECHNICAL SKILLS AND INTERESTS

- **Programming Languages:** Java, C++, Python, C#, Go
- **Web Technologies:** JavaScript, TypeScript, HTML, CSS, Bootstrap, Figma
- **Frameworks:** Spring, Angular, Apache Camel, Hibernate, Spring Boot, React.js, D3.js, JPA, Junit, Jasmine, Vue.js
- **Databases:** Oracle SQL Developer, MySQL, MongoDB, DynamoDB, SQL Server
- **Others:** AWS, IBM APIC, Liberty, Ubuntu, Bitbucket, Kafka, Bamboo, Docker, Maven, Terraform

WORK EXPERIENCE

American National Insurance Company, Tx, USA | Senior Software Engineer

Feb 2024 – Present

- Architected and developed robust **Java Enterprise Edition** applications using Enterprise **JavaBeans**, deploying on IBM **WebSphere Application Server**, facilitating seamless interactions for insurance agents and policyholders.
- Led the migration from IBM WebSphere Application Server to the lightweight **Liberty Server**, optimizing operational costs and improving deployment efficiency, and transitioning it to **Docker**, ensuring increased robustness and scalability.
- Implemented **server side caching** mechanism, improving system performance by 30% through optimized data retrieval and reduced redundant computations.
- Engineered a reusable Angular library, hosted in **Azure Artifacts**, accelerating cross-project development, and promoting code reuse.
- Boosted the application performance by 78% through the implementation of multithreading, significantly reducing response time.
- Strengthened application security by addressing **SQL injection** vulnerabilities and improving code quality with JUnit test coverage.
- Revamped the application architecture, improving performance, reliability and maintainability across multiple insurance products ensuring continuous, efficient usage by the agents and underwriters.

American National Insurance Company, Tx, USA | Agent Websites Summer Intern

Jun 2023 – Aug 2023

- Spearheaded migration to transition the existing ASP.NET C# codebase to Java-based technologies, such as **Jersey**, **EJBs**, and IBM **WebSphere** ensuring seamless integration with existing systems and databases.
- Designed and developed a user-friendly interface using **Angular 13**, empowering agents with a comprehensive platform to record and manage customer notes at various stages of interactions.
- Simplified development and maintenance of Java Batch programs employing **Restful APIs**.

CitiusTech Healthcare Technology, Mumbai, India | Full - Stack Engineer

Jun 2019 – Dec 2021

- Programmed several Java interfaces using **Apache Camel** and **Spring Boot** frameworks to manage flow of data between systems, **HealthRules Payer** applications, and data stores, utilizing both inbound and outbound processes.
- Optimized queries and stored procedures for faster execution of batch processes from 8 hours to 15 minutes.
- Deployed **Apache Kafka** messaging system as a replacement for **ActiveMQ** in the application.
- Built multiple screens for the **Angular** application, ensuring compatibility with various browsers, including Internet Explorer 11 and Microsoft Edge, and contributed to accelerating lagging unit test cases.
- Collaborated in an internal initiative to create a library of robust UI components exploiting **Angular Elements**, intended for reuse within organization.

ACADEMIC PROJECTS

Autoscaling Machine Learning applications using AWS cloud

Sept 2022 – Oct 2022

- Developed a robust face recognition solution leveraging Machine Learning, featuring a scalable public endpoint designed to handle peak loads efficiently with minimal latency.
- Deployed a user-facing web application in a hybrid cloud environment using OpenStack and AWS EC2 instances utilizing S3 for storing request data, DynamoDB for retrieving data, and implementing manual EC2 autoscaling with Amazon SQS buffer to manage load.

PEARL: Personal Emotion Analysis, Reasoning, and Learning tool

Aug 2022 – Oct 2022

- Developed PEARL, an innovative emotion analysis tool utilizing timeline-based tweet data to provide interactive insights into a person's emotional patterns derived from their social media text for 10 different users.
- Plotted numerous visualizations for the tool employing **JavaScript** and **D3.js** including Stream graph, Marimekko chart, Word Cloud, Circle Packing, Pie Chart, Area Chart, and Line Chart.

Recognition and Classification of handwritten digits using an Android Application

Aug 2022 – Oct 2022

- Created an Android application empowering users to capture images of handwritten digits on mobile devices and instantly upload images to a server.
- Implemented a Flask server to integrate a state-of-the-art deep learning framework trained on widely recognized MNIST dataset to place the classified digits in the respective folders.

AWARDS & EXTRA CURRICULAR ACTIVITIES

2023-2024: Volunteer at **Garden Kids of Kemah, Texas, USA**

2021-2022: Received a **Certificate of Appreciation** for enhancements done in the HRP Project.

2018-2019: Captain of V.J.T.I Basketball Team
